## Images

Knockout Validated: Park7/DJ-1 Antibody (4H4) [NBP1-92715] - Western blot shows lysates of 293T human embryonic kidney parental cell line and PARK7 knockout (KO) 293T cell line. PVDF membrane was probed with Mouse Anti-Human PARK7 Monoclonal Antibody (Catalog # NBP1-92715) followed by HRP-conjugated Anti-Rabbit IgG Secondary Antibody (Catalog #HAF008). Specific band was detected for PARK7 at approximately 23 kDa (as indicated) in the parental 293T cell line, but is not detectable in the knockout 293T cell line. This experiment was conducted under reducing conditions.

Western Blot: Park7/DJ-1 Antibody (4H4) [NBP1-92715] - Analysis of whole brain and cell lysates using mouse mAb against DJ1/Park7, NBP1-92715, dilution 1:5,000 in green. [1] protein standard, [2] rat brain, [3] mouse brain, [4] NIH-3T3, [5] HeLa, [6] HEK293, and [7] C6 cells. The DJ1 antibody detects protein with apparent molecular weight of 21kDa but only in human cell lines, since it does not recognize the rat or mouse DJ1 protein. The blot was simultaneously probed with chicken pAb to vimentin, dilution 1:5,000 in red, revealing a single band at about 50kDa present in all lanes, though at much lower levels in the tissue lysates.

Immunocytochemistry/Immunofluorescence: Park7(DJ-1) Antibody (4H4) [NBP1-92715] - HeLa cells stained with NBP1-92715 (green), chicken antibody to Vimentin (NB300-223, red) and DNA (blue). NBP1-92715 reveals strong cytoplasmic staining for Park7(DJ-1).

Simple Western: Park7/DJ-1 Antibody (4H4) [NBP1-92715] - Lane view shows a specific band for Park7 (DJ-1) in 0.5 mg/ml of HeLa lysate. This experiment was performed under reducing conditions using the 12-230 kDa separation system.
